CLINICAL PATHWAYS

Structured care plans that detail essential steps in the care of patients with a specific clinical problem. Defining these care pathways leads to value stream alignment.

With workflow applied to a clinical pathway, process level variations are now visible. By identifying the context in which variation occurs, caretakers are provided evidence of what works and what doesn't. You are now empowered with the data and control to make decisions.

A Standard Clinical Pathway + Workflow Automation + Data Synthesis = Visibility into Variations × Continuous Improvement = Exponential Improvements to Patient Outcomes and Cost of Care

The automation of processes, in which documents, information, and/or tasks are passed from one party to another for action, according to a set of rules. Result is elimination of waste and reportable costs reductions. By gathering inputs from disparate technologies, workflow logic synthesizes decision points to identify risk values.

Now that the data is visible, you can see evidence where variations impacted positive outcomes and repeat that across your organization, therefore continuously improving outcomes for all patients.
