

Clinical Pathways Workflow

Improve the continuum of care using Workflow Automation to automate and modernize your clinical processes – from admission through discharge – and beyond.

It has been proven that providing physicians with real time data, important to their decision making, leads to improved efficiency and reinforces the continuous improvement of their work. This real time information stream allows for an immediate assessment of what is working and what is not – resulting in a continuous feedback loop that ultimately improves the quality of patient care, experience, and health outcomes.

Workflow automation simplifies and eliminates manual activities for pre-op prep activities and post-op patient care, such as EMR data searches and creation of directed patient lists.

outpatient costs
35%

1. Hoverman JR, Cartwright TH, Patt DA, et al. Pathways, outcomes and costs in colon cancer: Retrospective evaluations in two distinct databases.

Reduce costs

Introduction of a clinical pathway in postoperative clinical care following a major surgical procedure found outpatient costs to be 35 percent lower for on-pathway versus off-pathway choices¹.

Better visibility

CMO's and other executives have accessibility at the system level to critical trends in real time versus historical reporting.

Real time care

Proactively manage high cost variability in care delivery with effective care planning, standardized patient assessments, and activity tracking to monitor patient progress.

Real time trending

Visibility into trends, physician adherence to standards, exceptions and outcome results.

Clear patient communications

Shared decision making between providers and patients allows for patient special needs and preferences to be incorporated easily into treatment plans.

Shorten patient stays

A study of total hip replacement patients showed that clinical pathways contributed to a one-day shorter stay².

2. Yoon RS, Nellans KW, Geller JK, Kim AD, Jacobs MR, Maccauley W. Patient Education Before Hip or Knee Arthroplasty Lowers Length of Stay. J. Arthroplasty. (2014)

Measure improvements and outcomes

Collect data and track patient's pre- and post-operative health progress in real time, minimizing readmissions for major surgical procedures.

Improve efficiency

Example: one hospital system improved outcomes and operational performance at the system's flagship hospital while delivering \$76 million in savings³.

3. Medical Center Combines Clinical Pathways, Financial Analysis to Improve Value, Hospitals & Health Networks

Stay in touch

Add touchpoints for each patient to ensure they have the necessary information for recovery, taking medications and use intelligent alerting to identify and resolve issues before a readmission occurs.

Clinical pathways workflow automation transforms the way patient information is managed, shared, and processed across the continuum of care. This mobile workflow automation software enables a more collaborative clinical working environment, resulting in a smoother and improved patient journey, patient experience, and health outcome.
